COPYRIGHT STATEMENT

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials including foreign works under certain conditions. In addition, the United States extends protection to foreign works by means of various international conventions, bilateral agreements, and proclamations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

The Columbia University Libraries reserve the right to refuse to accept a copying order if, in its judgement, fulfillment of the order would involve violation of the copyright law.

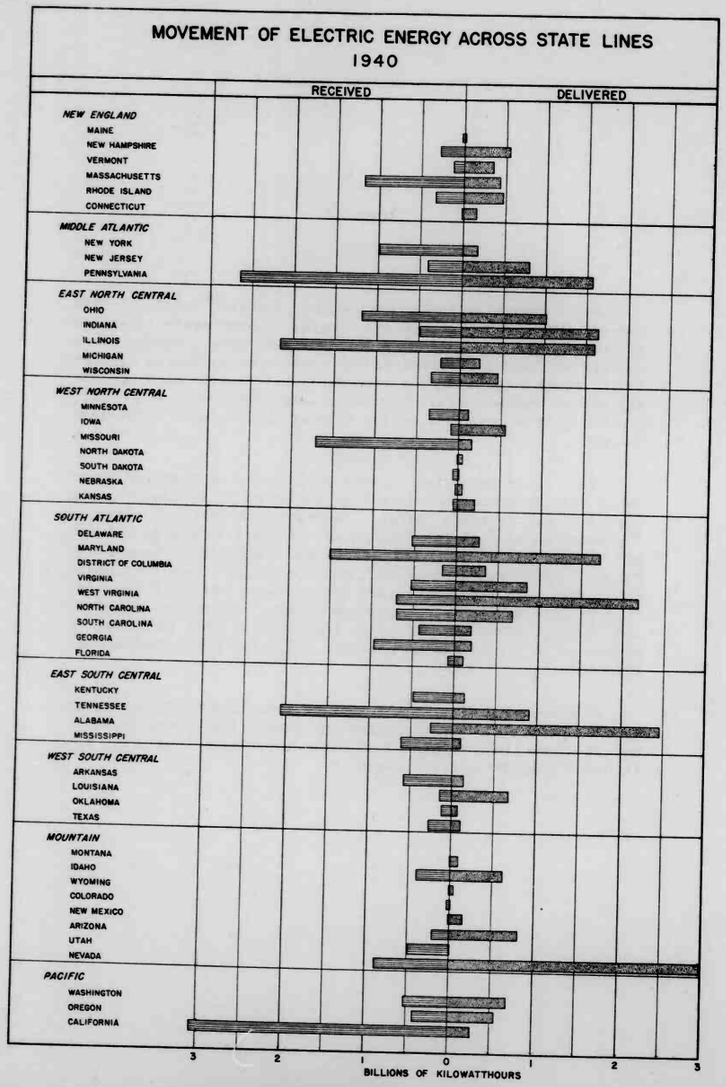
FOREWORD

This report presents information for each month of 1940 showing the movement of electric energy across state lines and international boundaries. All data shown were compiled from reports of utility companies and contain no estimated figures except those supplied by the reporting sources. The data include all intra-company energy crossing state lines and energy sold at retail, as well as all energy sold at wholesale in interstate commerce.

Each table presented in this publication is arranged so as to be readily comparable with data published in similar reports for 1939 and previous years. Separate publications entitled "Consumption of Fuel for Production of Electric Energy - 1940" and "Production of Electric Energy and Capacity of Generating Plants - 1940" supply data on the subjects indicated on a basis comparable with those published for previous years. A compilation of data on electric power production, generating capacity, and consumption of fuel by years from 1920 to 1940 inclusive is presented in a publication entitled "Electric Power Statistics, 1920-1940."

The above publications summarize data submitted each month by utilities and other organizations generating energy for sale except those industrial establishments selling less than ten thousand kilowatt-hours a month.



MOVEMENT OF ELECTRIC ENERGY ACROSS STATE LINES AND INTERNATIONAL BOUNDARIES

During 1940 a total of 28,957,093,000 kilowatt-hours was reported by electric utility companies as crossing state lines and international boundaries. This represents 20.4 percent of the total energy generated in the United States for public use.

An examination of the reports received for 1940 shows that approximately 812 transmission and distribution lines are used to transmit electric energy across state lines. Although the total number of lines involved has not changed appreciably during the last two years, higher operating voltages on a few long transmission lines and increased use of existing lines have permitted the amount of energy transmitted to increase from 26,015,-067,000 kilowatt-hours in 1939 to 28,957,093,000 kilowatt-hours in 1940 or an increase of 11.3 percent.

The energy available for use in each state is presented in Table 1 on the following page. The data in this table were computed by adding the amount of energy received in any state to the production within the state and subtracting the amount of energy delivered to points outside of the state. Since the production data shown is the sum of the net output of each generating plant, the figures showing the energy available within each state contain all transmission and distribution losses, as well as actual energy reaching the ultimate consumers.

It will be observed from the data in Table 1 that New York utilized 18,375,044,000 kilowatt-hours during 1940 or 12.8 percent of the total electric energy available for use in the United States. Pennsylvania with 13,620,213,000 kilowatt-hours. and California with 12,570,692,000 kilowatt-hours, were second and third respectively in the amount of energy utilized. These three states utilized 44,565,949,000 kilowatt-hours or 31.1 percent of the United States total.

International Imports and Exports of Electric Energy

The imports of electric energy from Canada totaled 2,135,557,000 kilowatt-hours and from Mexico 24,000 kilowatt-hours. Exports to Canada were reported as 4,453,000 kilowatt-hours and to Mexico as 17,460,000 kilowatt-hours. This leaves a net balance of 2,137,644,000 kilowatt-hours imported during the year.

The imports and exports of electric energy are summarized by months for 1940 in the following table:

The data for Canada in the preceding tables were furnished through the Dominion Bureau of Statistics, Ottawa, Canada, and include energy transmitted by industrial concerns for their own use. For this reason these totals are somewhat higher than the detailed data by states as shown in the tables which follow on pages 6 to 13 inclusive.
